New Zealand Ruling Class Data Suggests The Fully “Vaccinated” Are Getting AIDS

3-4 minutes

New Zealand’s ruling class has

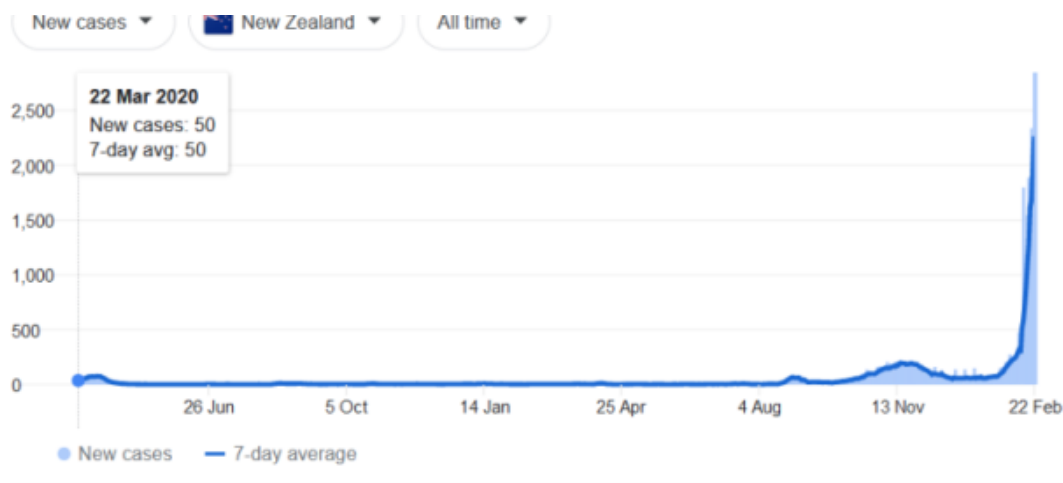

released data showing that those who are fully “vaccinated” are getting acquired immunodeficiency syndrome or AIDS. The newly released data is showing a major degradation of the immune system.

[But just like Public Health Scotland](#)

originally did before they were exposed, and just like the Government of Canada is doing now, the New Zealand Ministry of Health only provides a cumulative total of COVID “cases” from the 16th of August 2021.

This is both irritating and extremely misleading when you consider New Zealand is currently experiencing its largest wave of Covid-19 to date.

But that isn't the only deception. On the 16th August 2021, the date the New Zealand Ministry of Health has chosen to provide a cumulative total, just 18.4% of the population of New Zealand were considered fully vaccinated.

[According to Reuters](#), COVID-19 infections are increasing in New Zealand, with 20,632 new infections reported on average each day. That's 99% of the peak — the highest daily average reported on March 7. New

Zealand has administered at least 10,757,940 doses of COVID vaccines so far. Assuming every person needs 2 doses, that’s enough to have vaccinated about 109.4% of the country’s population, however, only 78% are considered fully “vaccinated.”

[Ruling Classes Cease Publishing Their Own Data Because It Shows “Vaccines” Are Resulting in AIDS](#)

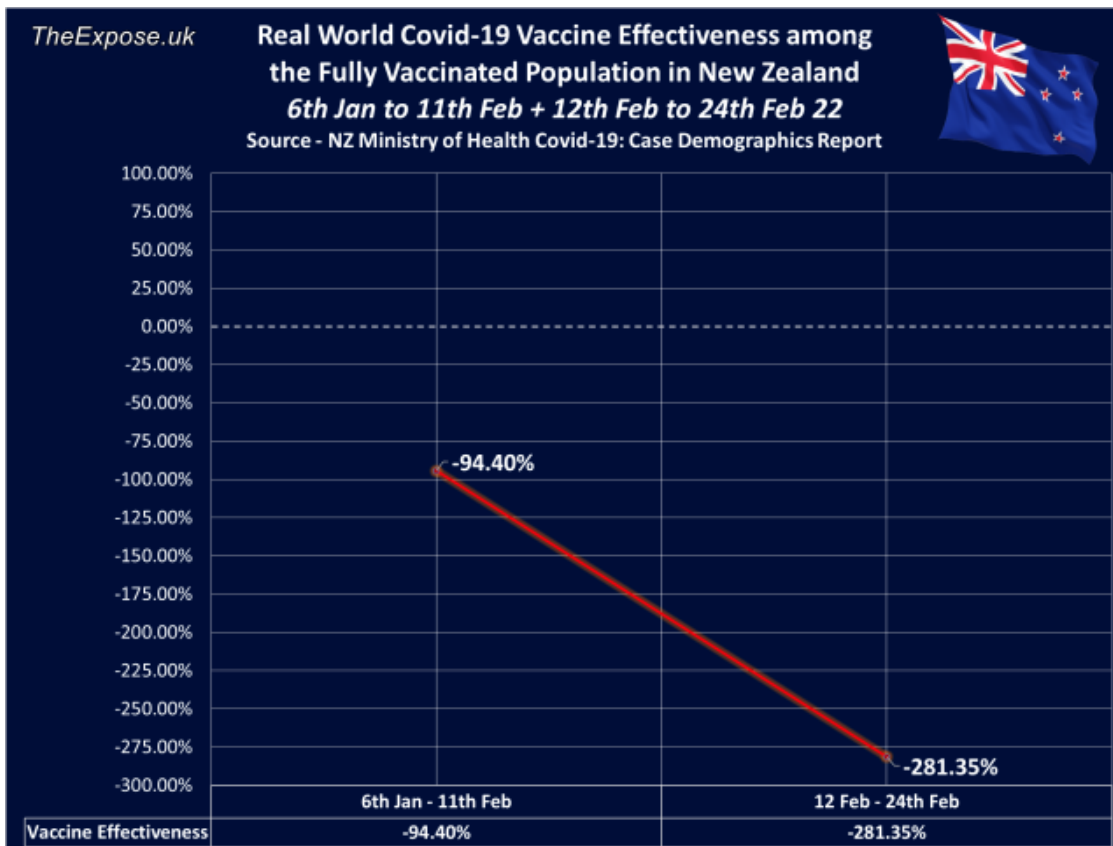

Now that we know the Covid-19 case rates by vaccination status we’re able to use Pfizer’s vaccine effectiveness formula to work out the real-world vaccine effectiveness.

[*For the full breakdown of the statistics, please go to the *Daily Expose* by](#)

[clicking here.](#)

Unvaccinated case rate – Vaccinated case rate / Unvaccinated case rate = Vaccine Effectiveness

The following chart shows the real-world two-dose Covid-19 vaccine effectiveness between 6th Jan and 11th Feb, and between 12th Feb and 24th Feb 22 –

Between 6th Jan and 11th Feb, the real-world Covid-19 vaccine effectiveness proved to be minus-94.4%, but by the 24th Feb, the real-world vaccine effectiveness fell to minus-281.35%. This means the fully vaccinated are 3.8 times more likely to be infected with Covid-19 than the unvaccinated/one dose vaccinated population. This is what double vaccination has done to the people of New Zealand.

Much of the data slowly being released by both Big Pharma and the rulers show that these shots they are trying to force on everyone are slowly giving the population who took them AIDS, which

is a complete degradation of the immune system. When this happens, literally the smallest cold can be detrimental, as the immune system will be too weak to fight off any virus.

[What's With All The HIV & AIDS Headlines in The MSM Lately?](#)

When people finally realize what has been done to them, will the masters have the nerve to say “well, no one forced you to take the shots?”
