# A World Gone Mad A Wake-up Call PART 1

BY RUSSELL BLAYLOCK, M.D.

**W**e are all now living in a nightmare, one that just will not end. This nightmare is not due to a natural disaster, a real pandemic, a declared war or any other accidental or conventional event – it is, by all truthful analysis, a carefully planned, highly manipulated, logistically engineered event that, if not stopped, will end in the death of all freedom in the World, and this is not an exaggeration. I have written two papers on this “event” and a final paper on the response to these articles.<sup>1</sup> The second of these papers has had an unbelievable response worldwide, as I describe in my third paper.<sup>2</sup>

## Questions Must Be Asked

In my final paper, I ask a number of questions that demand answers; but I am sure that none will be forthcoming from those who have engineered this disaster. Sometimes the right questions can provide more light on a subject than a detailed dissertation on the particulars. For example, why have the governments of the World not even considered temporarily halting the “vaccines” in the face of *their* admitted 40,000 deaths secondary to the injections and many millions permanently disabled by the jabs? Instead, they are aggressively increasing the injection programs and mandates in spite of this.

Why would companies, the military, and the medical-care systems mandate such an experimental injection when it is for a virus that no longer exists, and the studies clearly show that these “vaccines” have no protective effect on the extant variants? Why would governments and businesses continue to inject millions of people with a product that

has been shown to severely damage the immune system and, after a series of boosters, leave the injected person with a severely and progressively crippled immune system – so damaged that they are not only susceptible to all infections but also to the reactivation of latent infections that can become deadly?<sup>3</sup> Who would do that?

Why would the government bureaucracies, along with medical societies (for obstetric physicians) and State public health authorities encourage pregnant women to get the injections at a time when no – *absolutely no* – studies had been done on the safety of such an insane procedure? Why are these individuals and the media supporting such draconian programs directed at pregnant women, not only working but working tirelessly to hide the data demonstrating that in fact these women are undergoing a miscarriage rate 8 times higher than normal and that the incidence of severe infant malformations is skyrocketing among the “vaccinated”?<sup>4</sup> Why did *The New England Journal of Medicine* publish an article proclaiming safety of these injections in pregnant women when the article had been shown, beyond all doubt, to contain manipulated data to falsely prove safety, when in fact the study demonstrated that women in their first trimester who received the injection had an 82% higher miscarriage rate?<sup>5</sup>

Why were these same individuals within the government health bureaucracies carrying out a massive promotional campaign to encourage the vaccination of healthy young people, when powerful scientific studies clearly stated, beyond all doubt, that these individuals’ risk of infection and of transmitting the virus were infinitesimal?

Why did the CDC vehemently deny that young men were developing myocarditis/pericarditis at a much higher rate than normally seen in the community? That is, until it could no longer be denied, and hundreds of young men were either dead or crippled from heart damage. Why have they promoted the lie that these cases are mild and the young people fully recover when, in fact, several cardiologists have stated that is not so and now we find, utilizing new high-tech studies, that these young people have permanent scarring of their hearts?<sup>6</sup> Why, being that this “vaccine” is a totally new technology, for which there has been essentially no safety testing, animal or human, are we not following every injected person with an extensive battery of tests and follow-up – especially for hypercoagulation (the risk of forming deadly clots) and immune function? Instead, these people are being left to fend for themselves.

Why did Fauci insist that babies down to the age of 6 months and toddlers needed to be “vaccinated”? Keep in mind that this is the nefarious individual who provided essential technological and virological know-how to aid Chinese scientists at the Chinese Communist-directed Wuhan virological bioweapons laboratory, allowing them to create this viral scourge.

Babies’ and toddlers’ risk of contracting the virus and of transmission of the virus is essentially zero. Why did the U.S. Food and Drug Administration (FDA), a corrupt Federal bureaucracy, approve the “vaccines” for babies and toddlers? After all, this data was available to them as well and several people testified at the approval hearing exposing these scientific facts. Those attending the

hearing stated that the members of the approval panel made no effort to either answer these questions or defend what they were doing – none.

Why, after this approval by the FDA, did a large number of employees at the FDA and CDC suddenly quit? Did they suddenly acquire a conscience? Or, are they heading for the hills? We now know that young women injected with these deadly gene-altering agents risk a high incidence of sterility in the future. Is this why pharmaceutical companies either did no testing on pregnant animals or hid such data from public scrutiny?

One should also ask – why did Pfizer hide its biodistribution study? It took a freedom of information lawsuit to force its release. Interestingly, when we finally learned what it demonstrated it became quite easy to see why they wanted it hidden. The CDC, FDA, and the pharmaceutical companies all assured the public that the injected nanolipid carrier and the mRNA that produces prodigious amounts of spike proteins stayed at the site of the injection and did not travel throughout the body. The media, the handmaidens for these companies and the government, loudly stated that the charge that the nanolipid carriers spread throughout the body had been “fact-checked” and found to be a lie – i.e., misinformation. That happens when the sources of your “fact-checking” are the pharmaceutical companies or the eternally lying CDC.

Why is this important? Because we now know why so many “vaccinated” are dying suddenly, including a large number of healthy, young individuals. The nanolipid carrier is transporting the mRNA-generated spike protein throughout the body – to all organs, including the liver, the spleen, the heart, the lymphatics, the kidneys, and the brain and spinal cord – *everywhere*.

When this Pfizer safety study was finally released and examined (the release forced by a court order), it was found that the highest concentration of the deadly spike protein-producing carriers was concentrated in the ovaries of females and the bone marrow of everyone. High levels were also seen in the liver and spleen. Substantial amounts were also deposited in the male reproductive system. To no one’s surprise, the spike

proteins were found scattered all along the inner lining of blood vessels, explaining the finding of extensive blood clots scattered throughout the body. It also explained the high incidence of strokes, brain hemorrhages, pulmonary blood clots, and heart attacks being seen post-injection with this deadly product. It also explains the growing number of people, many very young, who are discovered dead in their beds a few days following their injection.

### The Dramatic Spike in Cancer Deaths

Dr. Ryan N. Cole, M.D., a highly trained pathologist who carefully catalogs all causes of deaths that enter his practice, noticed that there was a dramatic number of cancer cases and deaths occurring quite soon after the “vaccine” rollout.<sup>7</sup> The highest incidence included highly aggressive malignant melanomas in young males and uterine cancers in females.

This spike in cancers following the rollout of the “vaccines” was being seen all over the World, as Dr. Cole met with other pathologists who all told him they were seeing the same thing in their countries. Dr. Cole also noticed that patients – who prior to being “vaccinated” had had cancers that were in remission and well-controlled – suddenly, within a few months after being injected, experienced a rapid return of their cancers with very extensive spread to widespread areas of the body, what we call stage IV cancer. Again, other pathologists and cancer specialists across the Globe were seeing this same rapid return of cancer.

So, one must ask, why are cancer patients being strongly encouraged to take these vaccines? Why are the medical societies for oncologists telling their member physicians to follow this deadly practice? Many medical societies are receiving substantial financial rewards from these pharmaceutical companies. We must keep in mind, many of these cancer patients being “vaccinated” are small children, even toddlers and babies. Why the silence as to what is happening to the injected children with cancer?

Among the more common cancers in children we see as leukemias and lymphomas, which arise from the bone marrow and

lymphatic tissue, both were found to contain high levels of the “vaccine-distributed” spike proteins and nanolipid carriers. One study, conveniently and forcibly retracted from the medical literature, found that the spike proteins from the “vaccine” impaired two critical DNA repair enzymes, which when impaired greatly increase one’s risk of developing a cancer of some sort.<sup>8</sup> Another study found that the mRNA actually, by a special enzyme, was able to insert itself into the person’s DNA – meaning it could not only continue to produce the injected spike protein forever, but could also be transmitted to all offspring.<sup>9</sup> No one promoting these injections seemed to care.

### Hiding Safety Data and Causation

Another question we should all ask is, why did the FDA appeal to the court to hide the Pfizer safety data for 55 years at first, and then upped it to 75 years? We are talking about all of the information as to how these safety studies and efficacy studies were done, all the actual data as to what was found, what the complications seen in the participants of the safety study were, and just how effective this “vaccine” was at preventing the infection and protecting the population. It would also tell us how carefully the safety and efficacy studies were designed and performed.

Now that hundreds of lawyers are pouring through this court-released data, we see why they wanted it hidden for 75 years. What they have found so far is that the studies had been very poorly and sloppily done, the participants in the study were not properly followed, and their complications were not recorded accurately. For example, one young lady, age 13, was left partially paralyzed, severely cognitively impaired and requiring a lifelong feeding tube. On her official Pfizer data card, she was listed as having a “stomachache.”

What these lawyers also found was that in the secret original efficacy studies, Pfizer even makes the bold statement that the “vaccines” had *no effectiveness*. But, when the “vaccines” were released, that failure suddenly became 95.5% effective. Every government health agency, CDC, public-health departments, medical societies, and virtually

all of the media outlets parroted this lying nonsense – over and over. The endless mantra for the media and the CDC became – the “vaccine” is “safe” and “effective.” Virtually every doctor told his patients this lie, either knowingly or unknowingly. Many doctors are just as naive as the public.

Now we are *still* being told this same lie, especially about the safety, regarding the babies and toddlers. One whistleblower testified before a senate panel that when the injection was tested using animals – all of the animals died. So, as usually happens, they stopped doing animal testing. Now the experimental “animals” are and will be the poor human babies and toddlers.

CDC massages the data to make the “vaccines” look effective and to portray the unvaccinated as being at severe risk of catching COVID-19.

What we have seen throughout this “pandemic,” especially as regards the “vaccines,” is a deliberate presentation of so-called studies by the CDC and other promoters of the injection, implying that the vaccines are very safe and highly effective and that the unvaccinated are at a very high risk of infection and subsequent hospitalization and risk. How they did this is well explained in a paper appearing on the Children’s Health Defense website (*The Defender*) by physician Dr. Madhava Setty.<sup>10</sup>

### **Injecting Children and Pregnant Women**

Of particular interest is the issue of vaccinating pregnant women. In an article appearing in the Jan 7<sup>th</sup> Morbidity and Mortality Weekly Report (MMWR) of the CDC, the CDC relied on – in my opinion and Dr. Setty’s opinion – a totally fraudulent study, purposefully designed to show safety when vaccinating pregnant women. The end point of the study was based on the number of preterm births in vaccinated versus unvaccinated women.

Based on this manipulated study, the CDC authors concluded that “[t]he CDC recommends COVID-19 vaccinations for women who are pregnant, recently pregnant (including those lactating), who are trying to become pregnant now, or who

might become pregnant in the future to reduce the risk for severe COVID-19-associated outcomes.”

But, was this safety study actually true? To “fix” the study, the study designers first allowed or made sure that more of the unvaccinated were in a medical condition that naturally would put them at a higher risk of having a premature birth, such as obesity, poor general health, or other high-risk medical factors, and in addition, 25% of the unvaccinated mothers were already infected with COVID-19. This is called stacking the deck.

The most glaring “fix” was that very few of the mothers were in the first trimester of their pregnancy. Keep in mind that a previous study had demonstrated that the risk of miscarriage of those vaccinated during the first trimester was 82% higher than normal. Yet, take a look at the CDC’s recommendations. They were recommending the COVID-19 injections during all stages of pregnancy, including the first trimester. This high risk would also include women who “might get pregnant” and those “trying to get pregnant” as well.

Despite the compelling evidence that these “vaccines” dramatically increased miscarriages, fetal malformation, neonatal deaths, and other newborn baby complications, the media and the CDC continue to promote injecting pregnant women.<sup>11</sup>

What about the babies and toddlers? The reanalysis of the data by Dr. Setty disclosed that in order for one child to benefit from the vaccine, over 10,000 would have to be injected with all of the proposed “vaccines” – in essence, all receiving the jabs would risk the deadly complications from the injections, all 10,000.

Also, keep in mind, no studies have been done on the possible long-term effects of these vaccines, either during pregnancy or after birth. And, incredibly, no such studies have been even proposed by the CDC or medical establishment. We know that brain development, as well as other organ development, can be drastically affected in a delayed

manner by such immune stimulation and that these injuries can affect the children throughout their lives.

One other pearl is of critical importance. The CDC admitted that they “lost the control babies and toddlers” during these studies. What does that mean? For one, we learned that within a short period after these studies began, the children that were supposed to be the unvaccinated controls, were also fully vaccinated by the conductors of the study. That destroys the credibility of the study and hides any delayed critical health disasters. No one can convince me that that was an accident.

We know that after full vaccination with these mRNA injections, one’s immune system begins to undergo a progressive loss of effectiveness. That is, they become susceptible not only to infection by COVID-19 and its variants but to all infectious organisms – viral, bacterial, and fungal. The more boosters they get, the greater the destruction of the immune system. This also puts them at a high risk of cancers and neurodegenerative disorders.

All women injected with these mRNA “vaccines” should be made aware that the Pfizer biodistribution studies indicated that the spike proteins being massively generated by the nanolipid/mRNA system had their highest concentration in the woman’s *ovaries*. This not only increases the risk of sterility, but also the potential of developing ovarian cancer, as chronic inflammation in a tissue dramatically increases cancer risk. In addition, the spike proteins were found to enter the nucleus of the cell and suppress a critical anticancer system normally found in all cells, including one system, which when damaged is associated with a higher incidence of breast cancer and prostate cancer.<sup>12</sup>

Because these “vaccinated” individuals’ immune system would also be impaired, should they develop a cancer, it would be highly aggressive and deadly. 📌
