

Genomic stability and mRNA

Timothy Winey

Monday, October 24, 2022

If according to Bobo Feng et al., the structure and function of DNA is controlled by hydrophobicity and not hydrogen bonds (as previously thought)

https://www.researchgate.net/publication/335185984_Hydrophobic_catalysis_and_a_potential_biological_role_of_DNA_unstacking_induced_by_environment_effects

then the reverse transcription of mRNA vaccines potentially takes on a whole new complexion. Indeed it would seem that genomic stability itself may be at stake? As to when, or even if, the mRNA vaccines cease instructing cells to produce spike protein, no one seems to know? The proverbial elephant in the living room 2-part question seems to be ‘can genomic stability be restored and if so, how?’ Well, one wild card may be water itself. The so-called master-slave question of what role water plays in biology, remains controversial. That being said, it is an untested assumption to assume water is influenced by its environment but not the other way around. Jaque Benveniste and Luc Montagnier ruffled countless feathers toppling that statue, at least partially. Montagnier accurately predicted that prion disease would result from growth hormone treatments in France and made a similar prediction in his final paper regarding mRNA vaccines. <https://must-news.com/news/luc-montagnier-warns-of-the-next-danger-from-vaccines-prion-disease/>

Given the dire consequences of possible permanent disruption to the human genome, this researcher does not view the current situation as one where beggars can be choosers. For those already harmed by vaccines with precious little more to lose, why not, to borrow a term from Mr. Trump, offer them a ‘right to try.’ What’s the worst that could happen, other than ‘settled’ scientific humiliation? If altered water harmed subjects in some way, the establishment would have to acknowledge something like homeopathy being real, albeit harmful. If it helped, well, it might just save us from extinction. If things get much worse, Winey’s proposal may pale in comparison to curses chanted at Big Pharmakeia using chicken blood under a full moon.
