# Johns Hopkins Study: 99% of All Covid Prior Infections Resulted in ‘Natural Immunity’ That Lasted at Least 650 Days

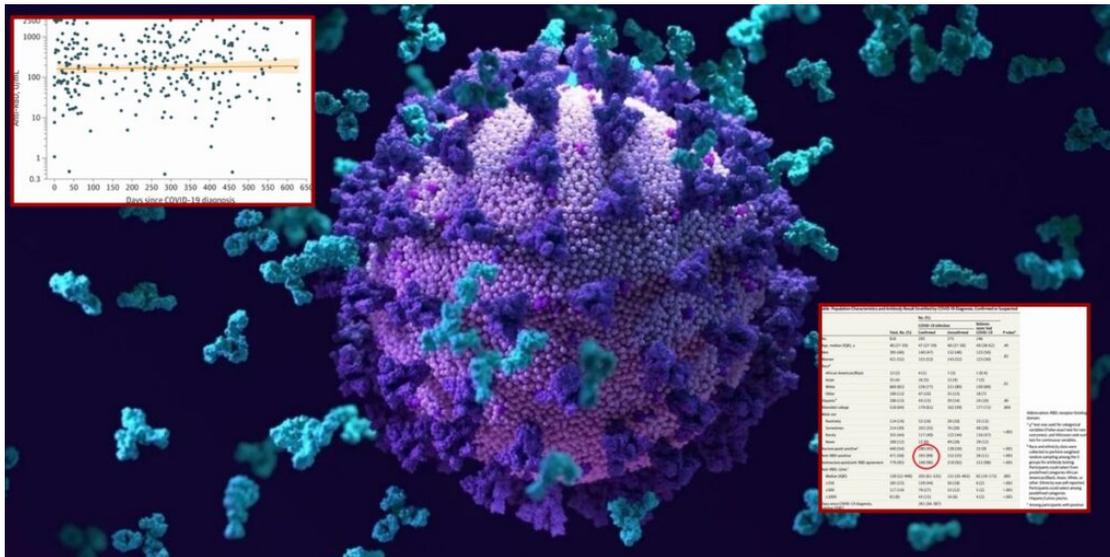

*HAF*

4-5 minutes

---

Johns Hopkins university this week dropped a quiet [bombshell of a study](#) that went widely ignored in the mainstream media [as always!].

Dr. Marty Makary, spearheading a team at Johns Hopkins to do the work that the CDC and NIH refuse to do, showed that 99% of unvaccinated people known to have Covid infections had robust “natural immunity” that did not diminish for at least 650 days.

## Results

*Of 1580 individuals invited to undergo serologic testing, 816 (52%) did so between September 24, 2021, and November 5, 2021. Participants had a mean age of 48.0 years, 421 (52%) were women, and 669 (82%) were White (Table). Fourteen percent reported routine mask use in public. Anti-RBD and anti-N antibody presence/absence were correlated (95%; Cohen  $\kappa=0.908$ ).*

*Among 295 reported COVID-confirmed participants, 293 (99%) tested positive for anti-RBD antibodies ( $\geq 250$  U/mL, 44%;  $\geq 500$  U/mL, 27%;  $\geq 1000$  U/mL, 15%). A median of 8.7 (IQR, 1.9-12.9; range, 0-20) months passed since reported COVID-19 diagnosis. The median anti-RBD level among those who tested positive was 205 (IQR, 61-535) U/mL. There was no evidence of association between time after infection and antibody titer (0.8% increase [95% CI, -2.4% to 4.2%] per month,  $P=.62$ ) (Figure).*

*Among 275 reported COVID-unconfirmed participants, 152*

*(55%) tested positive for anti-RBD antibodies ( $\geq 250$  U/mL, 18%;  $\geq 500$  U/mL, 12%;  $\geq 1000$  U/mL, 6%). The median level among those who tested positive was 131 (IQR, 35-402) U/mL.*

*Among 246 reported no-COVID participants, 11% tested positive for anti-RBD antibodies ( $\geq 250$  U/mL, 2%;  $\geq 500$  U/mL, 2%;  $\geq 1000$  U/mL, 2%). The median level among those who tested positive was 82 (IQR, 19-172) U/mL.*

*The charts included in the study reveal the story. As you can see, for three different types of important antibodies, about 95% of people with prior infections retained all three. 99% had the anti-RBD positive type of antibody.*

Most importantly of all, this is clear indisputable evidence that natural immunity is far more durable than vaccinated immunity: The Covid protection lasted for 650 days with no noticeable

decline.

**‘This Ends The Debate’:** [Israeli Study Shows Natural Immunity 13x More Effective Than Vaccines At Stopping Delta.](#)

As Becker News [reported in October](#), Dr. Makary was leading a study that would force the CDC and NIH to do their jobs and not merely act as **vaccine salesmen**.

**“The NIH should be doing a long-term study of natural immunity instead of [torturing thousands of beagle puppies](#), including cutting their voice box to avoid barking sounds (sick),” he said. “All taxpayer funded. All our health agencies need fresh new leadership.”**

**“My Johns Hopkins research team is leading a long-term study of natural immunity because the NIH and CDC are not doing it,” he added. “They have \$50 billion and 30,000 employees and yet can’t seem to conduct one of the most important studies we need done to inform the public.”**

**That he did. Now, even the CDC is [admitting](#) that natural immunity exists. This constitutes yet another “we told you so” in the now extremely long list that can be compiled by critics of The Science.™**
